DETAILED ACTION

Allowable Subject Matter

1. The following is a statement of reasons for the indication of allowable subject matter: Claims 1,15,29 and 30 are allowable over the art of record because the prior art does not teach a rectangular waveguide having one end short-circuited by a terminating conductor and the rectangular waveguide including a grounding conductor and one end of the antenna element being electrically connected with a position in the ceiling conductor, wherein the ceiling conductor includes a removed portion on the side of opened another end of the rectangular waveguide, whereby an electromagnetic wave of a radio signal fed to the feeding portion is radiated from the removed portion of the ceiling conductor and the opened another end of the rectangular waveguide, and in combination with the remaining claimed limitations.

Claim 10 is allowable over the art of record because the prior art does not teach a rectangular waveguide having one end and another end both of which are short-circuited by terminating conductors and the rectangular waveguide including a grounding conductor, at least one slit formed in the ceiling conductor in the widthwise direction of the rectangular waveguide, the slit being located in a position of which a distance to one end of the rectangular waveguide is substantially different from a distance to another end of the rectangular waveguide, and in combination with the remaining claimed limitations.

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Bobier, Yamamoto et al ('712), Woloszczuk, West et al, Bogner and Yamamoto et al ('618) are cited as of interested and illustrated a similar structure to waveguide antenna assembly.
